

True Potential Growth Portfolio

Portfolio Objective

The objective of the True Potential Growth Portfolio is to provide investors with a way to achieve their investment goals. The Portfolio offers full exposure to different manager styles within the Capital Growth risk profile. We review the Portfolio monthly and, if necessary, rebalance to the allocation of styles that we believe offers the best opportunity for growth within the Capital Growth risk profile. The Portfolio aims to produce a higher risk-adjusted outcome at a lower average cost, compared to an equally-weighted model of Capital Growth funds.

Risk Profile: Growth

The Growth Investor may be willing to accept high risk and chance of loss in order to achieve higher returns on his or her investment. Significant losses over an extended period may prompt the Growth Investor to shift to a less risky investment.

Ongoing Charge Figure (OCF)*: 0.76%

There are no entry or exit charges.

Launch Date: 1st October 2015

Investment Commentary

The True Potential Growth Portfolio produced a return of +0.37% for the month of July, net of Portfolio OCF.

Fixed income outperformed equity markets, with longer dated sovereign bonds particularly strong. Within equities, there was a reversal of leadership compared to earlier in the year. US equities, particularly within the information technology and communication services sectors, relatively underperformed. Investors instead looked toward regions and sectors with cheaper valuation levels after the strong returns that have stretched valuation levels in certain sectors and in particular anything artificial intelligence related. Domestic UK equities fared particularly well in this environment, with Japanese equities also producing good returns in GBP terms.

The True Potential 71M Growth fund provided the strongest returns against this backdrop, with the fund benefitting from having the largest exposure to UK equities in the portfolio. At the sector level, a tactical allocation to healthcare companies contributed positively. The fund also benefitting from being a larger holder of Japanese Yen, with the currency appreciating over the month.

Over the month, no changes were made to manager allocations within the Portfolios with the investment team believing positioning was optimal. Although no changes have been made to manager allocations, the True Potential manager cohort have been adjusting positioning. Examples include additions to domestically focussed UK companies as well as to the US equity market. Within fixed income, additions have been made to higher yielding European corporate bonds and also Emerging Market Debt.
