

True Potential Balanced Income Portfolio

Portfolio Objective

The objective of the True Potential Balanced Income Portfolio is to provide investors with a way to draw a secure, regular and growing income. The Portfolio offers exposure to a select group of investment partners and a range of risk profiles (Cautious to Growth), whilst remaining within the Balanced risk profile. We review the Portfolio monthly and, if necessary, rebalance to the allocation of styles we believe offers the best potential for yield within the Balanced risk profile. The Portfolio aims to produce a higher than average yield, compared to an equally-weighted model of True Potential Wealth Strategy income funds.

Risk Profile: Balanced

The Balanced Investor may be somewhat concerned with short-term losses and may shift to a more stable option in the event of significant losses. The safeties of investment and return are typically of equal importance to the Balanced Investor.

Ongoing Charge Figure (OCF)*: 0.81%

There are no entry or exit charges.

Launch Date: 1st October 2015

Yield as of: 30 September 2024** 3.63%

Please refer to the Fund Prospectus and Key Investor Information Document (KIID) for more information.

*OCF payable can fluctuate over time as the underlying investments are variable and can change.

**Income subject to revision in the current market environment.

Yield figure indicated on this page is the forward looking 12-month yield, net of charges and UK withholding tax.

Personal dividend tax charges may still apply and is subject to individual circumstances.

Tax rules may change in the future.

*Under the current Packaged Retail Insurance and Investment Products (PRIIPS) guidance we consider all ongoing charges including those from closed ended vehicles such as investment trusts in the OCF (Ongoing Charges Figure) calculation. We use investment trusts to gain access to certain asset classes, such as infrastructure, their closed ended structure being an important feature in such asset classes. The return an investor earns from investing in an investment trust is determined by the performance of its share price. This is a disclosure change and the cost of investing in the fund does not change.

Investment Commentary

The True Potential Balanced Income Portfolio produced a return of -0.08% for the month of September, net of Portfolio OCF.

Global equities extended year-to-date gains in September as the Federal Reserve initiated their interest rate-cutting cycle. The large stimulus package unveiled in China was forceful enough to generate positivity in equity markets. US equities outperformed global equities thanks to optimism surrounding lower US interest rates in an environment of robust economic growth and encouraging inflation data. European equities lagged as economic indicators of growth continued to disappoint and the expectation of corporate profit expansion cooled. Inflation has continued to undershoot the Central Bank's inflation forecasts and despite the economic outlook being relatively bleak, they have signalled a gradual lowering of interest rates. UK equities also underperformed global equities despite UK economic growth holding up slightly better than expected, with the UK's large sector allocations in Healthcare and Energy a drag.

US sovereign bond yields declined as the Federal Reserve cut interest rates by 0.5%, providing positive total returns for investors. Markets continued to price further interest rate cuts with inflation continuing to trend towards 2% and labour markets softening further. UK government bond yields also fell although underperformed US bonds due to ongoing concerns over sticky services inflation. Corporate credit performed positively in this environment. Sterling appreciated against the US dollar as elevated UK services inflation saw the Bank of England be more patient on lowering interest rates further.

The True Potential UBS Income fund provided the strongest returns against this backdrop, which benefitted from having the largest exposure to US equities within the portfolio, with the US one of the stronger performing equity markets over the month. The large allocation to high yielding corporate bonds also contributed positively. The Portfolio also benefitted from the GBP hedge applied in the True Potential Goldman Sachs Income Builder fund as Sterling appreciated, however was challenged by the allocation to the True Potential Monthly Income fund month due to its equity only being allocated to the UK, one of the weaker equity markets in September, producing negative returns.

Over the month, no changes were made to manager allocations within the Portfolios with the investment team believing positioning was optimal. Although no changes have been made to manager allocations, the True Potential manager cohort have been adjusting positioning. Examples include additions to UK and German government bonds in favour of Japanese and Canadian bonds.
