investment objectives.	types and styles may perform better than others and investment objectives may become more difficult to achieve. Emerging Market Risk - Investments in emerging markets may involve							
	greater risks due to political and economic instability, and underdeveloped markets and systems. Counterparty Risk - There may be cases where the organisation from which we buy a derivative, or an asset, fails to meet its obligations. The Fund's cash							
	deposits are also subject to counterparty risk.							
	Derivative Risk - The Fund is entitled to use derivatives. Derivatives may not							
	achieve their intended purpose. Their prices may move up or down							
	significantly over relatively short periods of time which may result in losses greater than the amount paid. Operational Risk - The Fund faces non-market risk, relating to purchasing, holding and servicing the Fund's assets. Credit Risk - Where the Fund invests in bonds, there is a risk the bond issuer may fail to meet its repayments. Changes in interest rates, inflation and the creditworthiness of the bond issuer may also affect the bond's market value. This risk is particularly relevant where the fund invests in bonds with a lower credit rating. Exchange Rate Risk - The Fund may invest in securities not denominated in GBP. The value of your investments may be affected by changes in currency exchange rates.							
	Liquidity Risk - Certain Market conditions could make sufficiently liquid assets difficult to sell quickly at a fair price. This could result in an							
	unpredictable fall in the value, and overall liquidity of the Fund. The above risks may cause losses in the Fund. For full details on risk factors for this Fund, please refer to the Prospectus.
