

# True Potential Cautious Portfolio

## Portfolio Objective

The objective of the True Potential Cautious Portfolio is to provide investors with a way to achieve their investment goals. The Portfolio offers full exposure to different manager styles within the Cautious risk profile. We review the Portfolio monthly and, if necessary, rebalance to the allocation of styles that we believe offers the best opportunity for growth within the Cautious risk profile. The Portfolio aims to produce a higher risk-adjusted outcome at a lower average cost, compared to an equally-weighted model of Cautious funds.

## Risk Profile: Cautious

The Cautious Investor may be sensitive to short-term losses. A Cautious Investor's potential aversion to losses could compel them to shift into a more stable investment if significant short-term losses occur. Analysing the risk-return choices available, a Cautious Investor is usually willing to accept somewhat lower returns in order to assure greater safety of his or her investment.

**Ongoing Charge Figure (OCF)\*:** 0.78%

## Investment Commentary

The True Potential Cautious Portfolio produced a return of +2.70% over the month of January, net of Portfolio OCF.

Global equities rebounded in January after a weak end to a strong year in December, buoyed by good news on earnings and a pause in the sharp increase in bond yields. US equities performed well but lagged Europe over the month as some of the euphoria around Trump's election win faded. News that a Chinese company had developed an open-source large language model at a fraction of the cost of US competitors checked the performance of technology stocks, with Nvidia dropping almost 11% over the month. Global sovereign bond yields continued to rise in the first half of the month, with strong growth in the US and fiscal concerns in the UK putting the US Treasury and UK gilt market under pressure. However, these concerns subsided, and yields dropped over January as a whole, resulting in modest positive returns. Gold was a particular highlight with the asset class benefiting from heightened market volatility. In currency, Sterling depreciated by 1.0% against the US dollar and the euro in January as expectations for interest rate cuts in the UK started to build again, fuelled by indications that the UK labour market is deteriorating quite rapidly.

The True Potential Close Brothers Cautious fund performed strongly. An overweight to equity was rewarded and stock selection was strong, with notable outperformance of UK stocks RELX, 3i Group and CRH Group.

Over January, the allocation to Schroder was increased from 10% to 11%, and the allocation to 7IM was decreased from 8% to 7% within the Cautious Portfolio, in a continuation of last month's manager allocation change. Underlying managers are also actively making changes. Examples include trimming exposure to US equities and rotating into European equities and increasing fixed income exposure.
